HISTORY

Coffee History and Culture

INTRODUCTION TO COFFEE

Did you know:
The tradition of starting each day with a cup of coffee has been an obsession in different parts of the world for centuries.

- Overone billion cups of coffee are consumed each day across the world.
- Coffee is one of the world's most valuable commodities, ranking second to oil in terms of dollars traded on internationalmarkets.
- Coffee is grown in approximately 70 countries. The highest 3 producers are Brazil, Vietnam and Colombia.

Our aim is to teach you the art of making espresso coffee and how to deliver the perfect cup every time. As every coffee lover knows, it is not just the quality of the beans used but also the skill of the barista that produces the best espresso. We have blended the finestcoffee beans...the rest is up to you.

BRIEF HISTORY OF COFFEE

Legends abound regarding the origins of coffee. No one knows for sure exactly how coffee was discovered but there are several theories. One of the more popular legends refers to a goat herder named Kaldi, in the area of
Ethiopia, Africa, who, in around 600AD, observed the goats acting unusually frisky after eating berries from a bush. Curious about this phenomenon Kaldi tried eating the berries himself.
He found that these berries gave him a renewed energy. The news of this energy-laden fruit quickly spread throughout the region.

Monks, hearing about this amazing fruit, dried the berries so that they could be transported to distant monasteries. They reconstituted these berries in water, ate the fruit, anddrank the liquid to provide stimulation for a more
awakened time of prayer.

The coffee plant is native to Africa. It was known that coffee berries were eaten whole at first or crushed and mixed with fat and carried by wandering tribesman northwards to the Arabian region. Here the coffee then traveled to Turkeywhere the Dutch orchestrated the first successful planting outside Arabia -on the island of Java- in 1699.

The coffee plant and the start of modern d a ycafes (known as coffee houses) spreadthroughout Europe and The Americas in the 17th and 18th century

COFFEE ROASTING

- The Arabian people were the first to roast coffee beans over an open fire. They then ground the beans into a powder, to be mixed at a later time with water - creating what is now known as a ‘cup of coffee'. Atradition had been started!
- The roasting process and equipment has been perfected through the centuries to provide a more consistent product with optimal flavour characteristics.
- Roasting involves heating the green (raw) coffee beans in a cylindrical drum for approximately 12-15 minutes at high temperatures, which can exceed 200°C.
- As the beans cook, they change colour to become brown, lose moisture and become more brittle. During this process the wonderful flavours and aromas that we know as coffee are created.
- The roaster must carefully control the roasting process to ensure the desired roast (i.e. darkness ofthe coffee) is achieved.
- Once the roasting is complete, the beans are cooled before packing ready for distribution.

Coffee History and Culture

BOTANY OF THE BEEN

There are two major species that are grown for commercial use: coffeaarabica (known as 'Arabica') and coffea canepholtanown as 'Robusta').

Left to mature, the coffee plant wouldgrow to a height of 10 metres, but on plantations the plants are pruned to more easily allow harvesting.

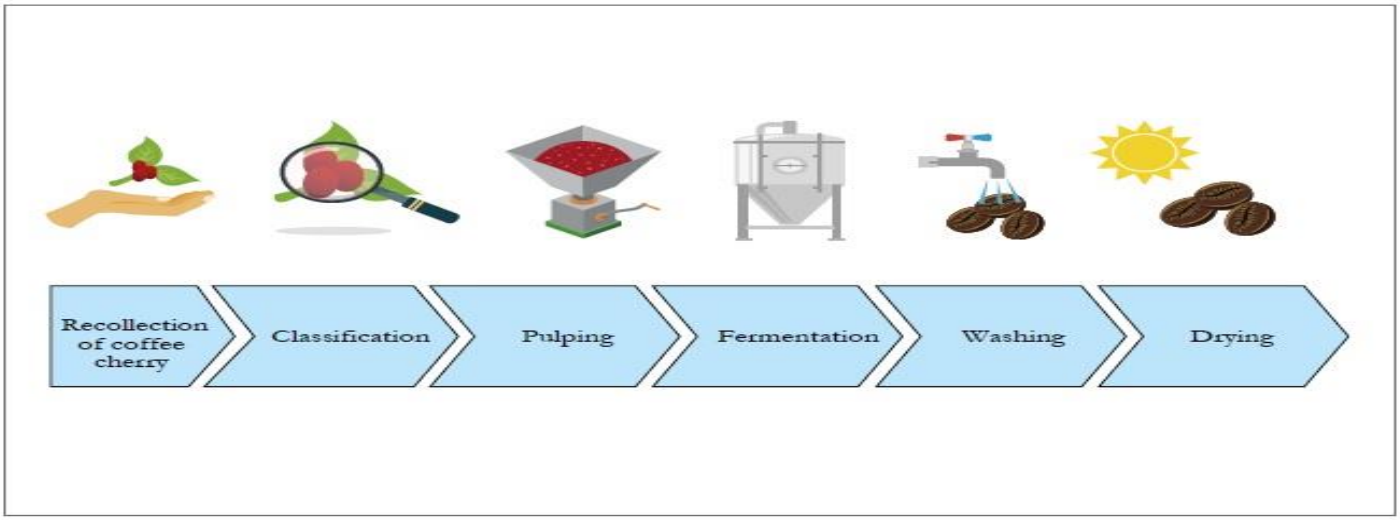

It takes 3-5 years for the plant to produce its first fruit and each tree annually produces enough coffee forapproximately 40 cups of coffee. Properly lookedafter, a coffee plant can be productive for up to 50 years.

Arabica:
Grown at higher altitudes (up to 2000 metres above sea level) where there is sufficient rainfall. Typically the higher the altitude, the better the quality, it is richer in flavour and has ahigher acidity level, with an excellentaroma.

Robusta:
Flourishes at lower altitudes (up to 800 metres above sea level), is disease resistant and quicker growing. Contains more caffeine, less acidity and is generally of a lower quality, hence thereason for using it in instantcoffee. It is also used in espresso blends where more body and crema is required.The Robusta bean tends to be smaller and more rounded in shape.

DECAFFEINATED COFFEE

Decaffeination is the name given to the process wherecaffeine is removedfrom the green (raw) beans. Roasted coffee beansmusthave less than 0.1% caffeineto becalled 'decaffeinated".

Coffee History and Culture

McCafé

LANGUAUGE OF COFFEE

Fragrance A key word describing the freshness and quality of coffee is 'fragrance'- which is released when the bean is roasted and then again when it's ground

Aroma When hot water hits theground coffee, tasters refer to its 'aroma. Words used to describe the aroma include delicate, moderate, strong, rich, fragrant or complex

Body More experienced tasters can discuss the 'body' of a coffes - the way a coffee is experienced by the mouth. A full-bodied coffee has a rich texture and heaviness on the tongue, with a taste that lingers. Coffee lacking body is thin and watery.

Crema Espresso coffee should have a golden coloured layer called 'crema'. Crema looks a little like honey,
but is in fact a product of the oil in the beans. The crema makes a 'cap' which helps retain the aroma and flavours of the espresso within the cup .The presence of crema indicates quality

Acidity The word 'acidity which is often used to describe coffee, refers to the pleasingly crisp, sharp tasteof coffee

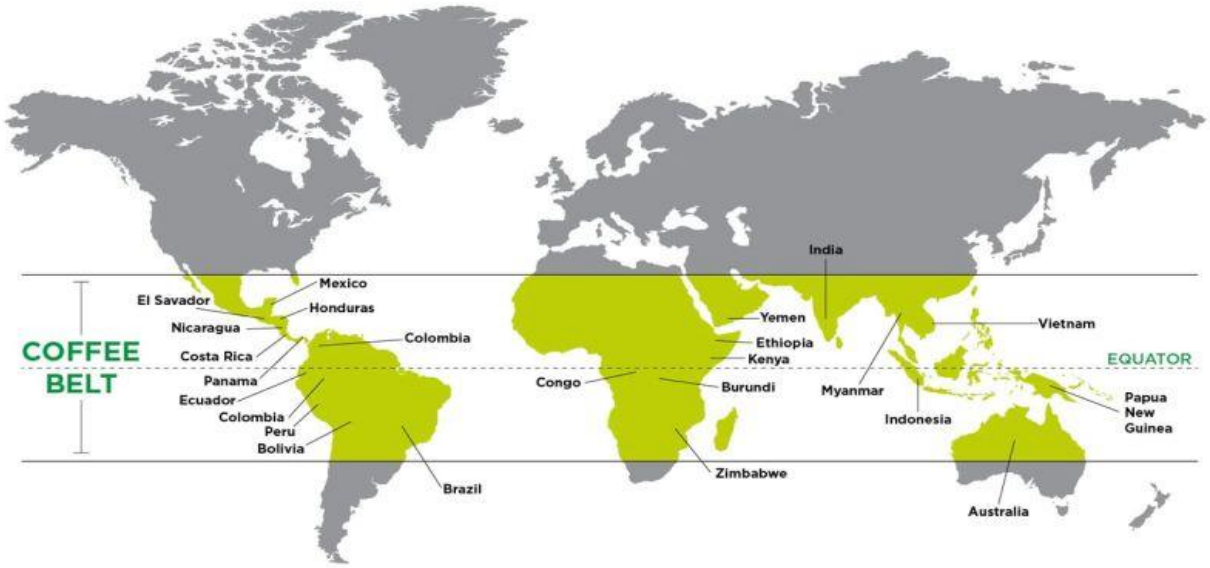

Bite Roasting eliminates some of the acidity, so a light roasted coffee will contain the highest amount and is said to have a lot of 'bite.

Flavour is the combination of the aroma and the taste that thecoffee impresses in the mouth. There are a large number of terms relating to flavour,such as nutty, caramelly, spicy, fruity, smoky, chocolaty, bland and herby

The exact 'flavour' of each coffee bean is influenced not only by roasting but also by where it's grown. Key factors include the type of soil the plant is grown in, the climate, the way the plants are cultivated and the method of picking

COFFEE ORIGIN

- Coffee is a tropical plant that grows mainly ni the regions shown below, which includes some 70 countries
- Coffee 'origin' refers to the country where coffee is grown
- McCafé's coffee is from Guatemala.Colombia. Costa Rica and Ethiopia

Basics

McCafe Basics

Shift preparation

☑ Clean hands

- Wash hands at least every 60 minutes. Use antimicrobial handwash (McD AMHI. Wash hands past wrists for 20 seconds.
- Dry hands thoroughly using hand dryer or disposable paper towels.

☑ Check equipmentP

- Machines: Check all equipment is clean, in good working order and safe.
- If any parts of equipment are damaged, report this immediately to shift manager.
  Refer to McCafé Opening SOC for a list of equipment to check.

☑ Check stock/misc.

- Ensure there is an adequate supply of stock for the shift.
- Check freezer, fridge and ambient display stock levels.
  Refer to the McCafé Opening SOC and your restaurant's McCafé stock build-to sheet.
- Waste sheet and cake timing system available.

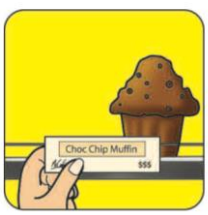

☑ CheckPoperating supplies

Ensure the following is available:

- McCafé Pre-wash AMH Solution in pump for the McCafé sink.
- McD Sanitizer Solution spray bottle, for all benchtops, inside display cabinets and refrigerator.
- McD Stainless Cleaner - dressing for stainless surfaces.
- McD Dishwasher Detergent and Rinse Aid for dishwasher.
- Espresso machine cleaning tablets for daily cleaning of espresso machine
- Green towels for steam wand

☑ Check product tags

- Correct product tags should be on all products at all times.
- Ensure tags are clean and visible.
- Attach tag to shelf

☑ Check cloth buckets

- Place 1/2 packet of McD Sanitizer in a cloth bucket and fill it with 4.75 liters of warm water (approx. 3/4 full)
- Put Green-striped, cloth towel – into sanitized water.
- Place an empty cloth bucket for dirty clothes next to the clean cloth bucket.
- Change cloth buckets and sanitized water every 4 hours.

McCafe Basics

Daily Checks

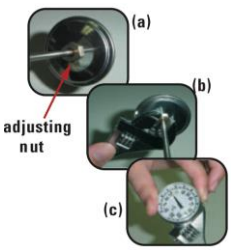

☐ Milk thermometer calibration test

1. Prepare Ice Water
In a McCafé
Coffee Cup, prepare a solution
consisting of 50% ice and 50% cold water.

2. Read the temperature
Immerse McCafé
Milk Thermometer stem at least 5cm
into solution, without touching the cup. allow 30 seconds for the temperature to stabilize. The temperature should read 0°C. If outside this range, adjust the thermometer.

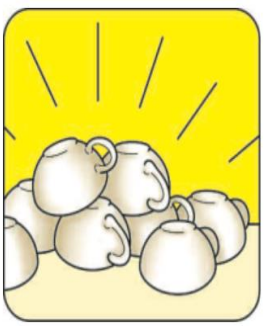

3. Adjust the thermometer (if required) Hold the adjusting nut (a) under the head with a shifting spanner (b).
Re-immerse thermometer and adjust by turning the head with fingers so the pointer reads 0°C

☐ Crema Test

To ensure the quality of coffee, perform the crema test when opening your espresso machine each day.
Refer to your Espresso Machine OPS.

☐ Check china, glass, and display plates

FOOD SAFETY

Get Safe. Do It!

- **Check any glass, china, or display plates for chips, cracks, or excessive scratching on a daily basis.**
- **Remove any damaged glass, china, or display plates from service, discard them into a rigid container, and place them in the trash bin**

McCafe Basics

Milk Frothing

1. Fill milk jug

- Choose the correct size jug.
- Attach a thermometer to the jug and fill about 1/3 full of cold milk.
- Do not heat more than the amount of milk required
- Return the milk bottle to the refrigerator.

2. Purge the Steam Wand

- Quickly release steam for a few seconds by turning steam on and off whilst directing stream wand into drip tray using a Green cloth.

3. Insert Steam Wand

- Place milk jug with a thermometer under the steam nozzle and immerse the nozzle as far as possible without the nozzle actually touching the base of the jug.
- Hold just with the handle towards you and place the steam arm to pull against the jug's spout.
- Open the steam valve by pressing the steam button
- Immediately place hand on the base of the jug for support and to sense temperature

4. Froth Milk

- Lower jug immediately so nozzle is 5-10 mm below surface to aerate milk.
- After a few seconds, gently lower jug down still ensuring nozzle is submerged just below milk surface. It should make a hissing sound.
- If there is no sound, the nozzle is too deep and will not froth milk. If too far out milk will spit and could burn.
- Continue lowering jug as froth rises until the milk is 40°C and keep the jug steady until temperature reach 60°C
- Prevent burns - only touch steam wand by black rubber grip or with cloth

5. Monitor Temperature

- Stop heating milk when thermometer reaches 60°C
- If froth has reached top of jug and temperature is not at 60°C, lower nozzle into jug to heat milk further.
- Tap jug gently on bench to release large bubbles.
- It is important to maintain milk temperature between 60°C and 70°C. The best indicator to assist in knowing when to remove jug is when it just becomes too hot to touch the base.

6. Clean steam wand

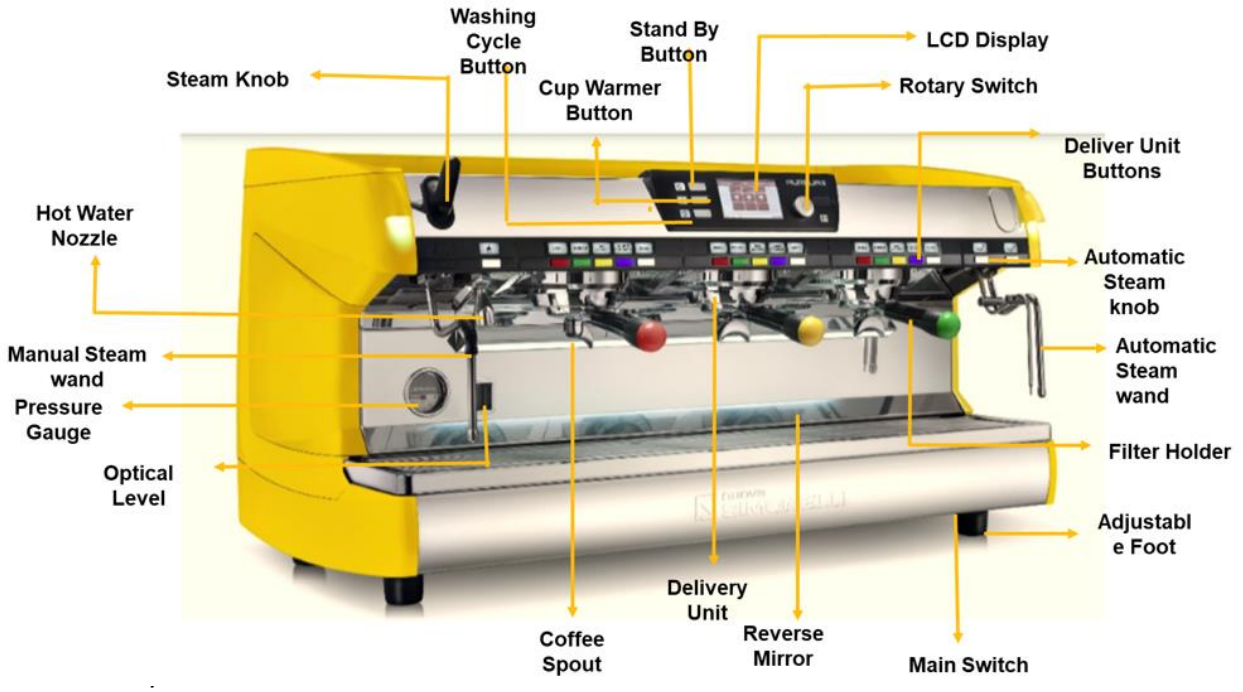

- After every use, purge steam wand for 3 secs, ensure steam valve is off and wipe steam nozzle and steam wand clean with correct (green check) clean, sanitized cloth. Clothes are not to be mixed.
- If this fails to remove build up, wrap a cloth around the steam arm, turn steam on for 10 secs and keep cloth in place.
- Remove the cloth carefully.
- Be careful not to bum yourself on the hot steam wand.

Machine Settings

Espresso Machine - Simonelli

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

1. Check equipment parts for completeness, condition, cleanliness & sanitation including (portafilters, baskets, drip tray, steaming knob, steaming spout).

2. Power on the main switch 30 minutes prior to opening. Wait for 5 minutes to fill up the boiler.

3. After 5 minutes, switch on the boiler heating element. Machine will heat for approximately 30 minutes. After 10 minutes the machine must be purged of any airlocks by momentarily opening both steam valves in turn. The machine is ready for use when the pressure gauge indicates pressure between 1.05 to 1.2 bar.

4. Switch on the cup warmer only when the cups are not warming enough.

5. Without portafilter handles in place, run all group heads 3 to 4 times using small pour button to circulate hot water through the group heads.

6. Check the water temperature every morning. Fill the jug with hot water from the outlet in the machine. Use the thermometer, temperature should be between 90C to 93C.

7. Before making coffee, place the portafilter into the group heads to warm up. Leave the handles unlocked and resting in the group heads. Locking them will put unnecessary stress on the group head seals.

8. Perform crema test by following the procedures for making espresso. If crema is not achieved, inform the MIC and call for service.

9. Place the clean and sanitized cups onto the warmer. Allow them to heat before making coffee.

Remember:

Make sure that the cups are free of water before placing on top of the warmer. Place portafilter basket side down on the drip tray.

Ensure to check the following prior to operation

Water pressure - 8 to 9 bar
Water level - green light
Coffee bar - 1.2 bar

Coffee Grinder - Simonelli

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Espresso Grinder Procedure:

1.Switch on the grinder machine. Check the cleanliness and condition of the machine.

2. Remove the lid from the hopper. Fill up the hopper with coffee beans according to the projected volume. It is permissible to fill more if the anticipated business volume is very high. If the business volume is low, the level of the coffee should be lower than half full.

Note: Beans can hold for maximum of 4 hours in the hopper.

3. Press the desired espresso base setting button.

4. Use a clean, heated portafilters. Make sure to select the correct basket size in accordance to the grammage of coffee that will be dispensed.

5. Insert the portafilter in the filter holder fork shaped rest underneath ground coffee chamber. The beans will be automatically dispensed.

6. Remove the portafilters

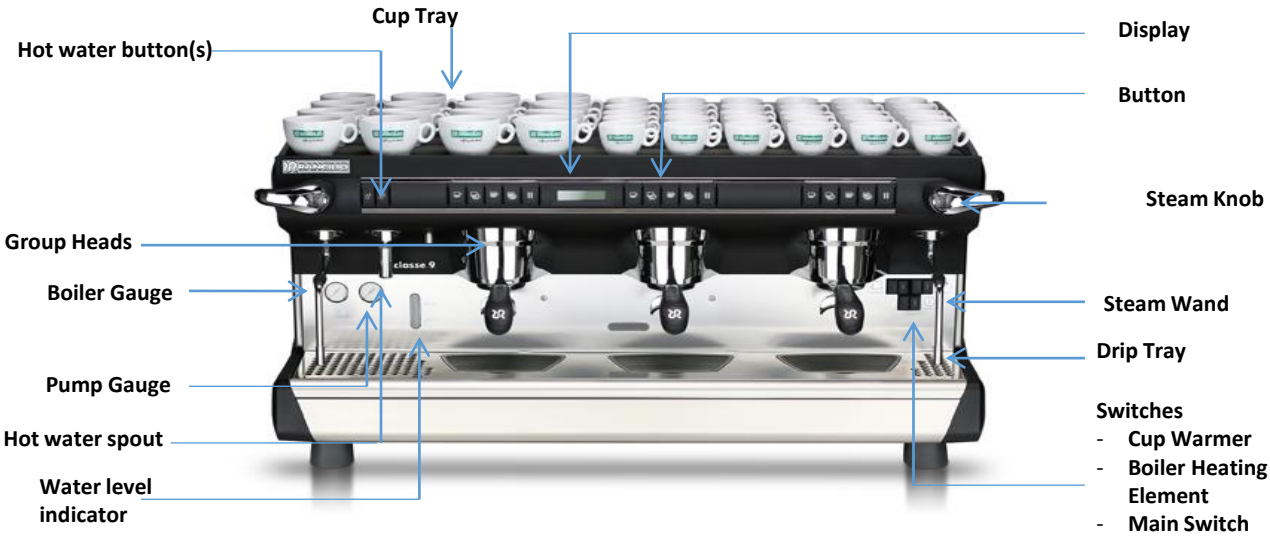

7. Tamp the grinded beans slightly and release the handle once you hear the click.

8.Wipe the palm over the top of the portafilter basket and trail fingers over the lugs to remove any loose coffee grounds.

Espresso Machine - Rancillo

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Overview of Parts

Switch On / Off

1. Check equipment parts for completeness, condition, cleanliness & sanitation including (portafilters, baskets, drip tray, steaming knob, steaming spout).

2. Power on the main switch 30 minutes prior to opening. Wait for 5 minutes to fill up the boiler.

3. After 5 minutes, switch on the boiler heating element. Machine will heat for approximately 30 minutes. After 10 minutes the machine must be purged of any airlocks by momentarily opening both steam valves in turn. The machine is ready for use when the pressure gauge indicates pressure between 0.95 to 1.05 bar.

4. Switch on the cup warmer only when the cups are not warming enough.

5. Without portafilter handles in place, run all group heads 3 to 4 times using small pour button to circulate hot water through the group heads.

6. Check the water temperature every morning. Fill the jug with hot water from the outlet in the machine. Use the thermometer, temperature should be between 88C to 92C.

7. Before making coffee, place the portafilter into the group heads to warm up. Leave the handles unlocked and resting in the group heads. Locking them will put unnecessary stress on the group head seals.

8. Perform crema test by following the procedures for making espresso. If crema is not achieved, inform the MIC and call for service.

9. Place the clean and sanitized cups onto the warmer. Allow them to heat before making coffee.

Remember:

Make sure that the cups are free of water before placing on top of the warmer. Place portafilter basket side down on the drip tray.

Ensure to check the following prior to operation

Water pressure - 8 to 9 bar
Water level - green light
Coffee bar - 0.95 to 1.05

Espresso Machine - Rancillo

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Daily cleaning procedure

Note! Do not use abrasive sponges and detergents or solvents! If cleaner is required, follow the instruction in the package! Do not immerse machine into water!

1. Clean housing with damp cloth. Follow the grain of the satin finish on stainless steel parts.
2. Clean steam wand/ hot water spout.
3. Remove filter holders/ unlock the filters, brush/ clean all parts.
4. Brush the outlets and the seals under the group head.
5. Rinse with hot water to remove all the coffee bean residue.
6. Submerge steam wand and head with cleaning supply.

Cleaning of group head

The machine has to be under pressure.

1. Hold the corresponding button of the left group until Coffee Cleaning is displayed(5 seconds).

2.Follow the on-screen information as follows:
Coffee Cleaning? Press [Enter]
Insert blind filter and add the detergent (1/4 espresso spoon for each group head.
A Cleaner [Enter]
The groups are cleaned alternately.

3.Remove blindfilter disk. Lock the filter holder again then [Enter].
4.Press button D after cleaning
Remove the filter holder, knock it out and lock it again.
Do not damage the filters.
5. Switch off cup warmer, boiler heating element and the main switch.

Cleaning Filter

The machine should be switched off and cooled down. Use container of glass or stainless steel.

1. Prepare solution in glass or stainless steel container
2. Immerse filter holder/unlocked filter in solution (hot water with an espresso spoon of coffee cleaning detergent for at least 20 minutes.
3. Rinse filter holder/ filter under running water.
4. Reattach filter holder, lock the filter holder into the group head.
5. Remove cup holder grid, clean drain outlet.
6. Re-attach cup-holder grid

Do not serve the 1st coffee produced in the morning to remove the taste after cleaning.

Hot Drinks

Espresso Machine - Rancillo

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Rancillo Grinder

Portafilters with baskets

Tamper

Espresso Grinder Procedure:

1.Switch on the grinder machine. Check the cleanliness and condition of the machine.

2. Remove the lid from the hopper. Fill up the hopper with coffee beans according to the projected volume. It is permissible to fill more if the anticipated business volume is very high. If the business volume is low, the level of the coffee should be lower than half full.

Note: Beans can hold for maximum of 4 hours in the hopper.

3. Press the desired espresso base setting button. (11.5g, 17g, 19g)

4. Use a clean, heated portafilters. Make sure to select the correct basket size in accordance to the grammage of coffee that will be dispensed.

5. Insert the portafilter in the filter holder fork shaped rest underneath ground coffee chamber. The beans will be automatically dispensed.

6. Remove the portafilters and level the coffee to avoid shot channeling.

7. Tamp the grinded beans slightly and release the handle once you hear the click.

8. Wipe the palm over the top of the portafilter basket and trail fingers/ use a brush over the lugs to remove any loose coffee grounds.

Espresso Machine - Rancillo

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Extracting the espresso base

9. Position the portafilter securely under the group head. The lugs must be lock into place

Overtightening will break the group head, Not tight enough will result in a poor-quality espresso base.

10. Place the selected cup size under portafilter spout and press the appropriate button in accordance with the selected coffee recipe (base) – (Single/ Double/ Standard/ Large Espresso)

11. When poured the coffee base should have a rich golden-brown crema.

12. After every base is made, remove portafilter.

13. Gently knock the portafilter against the bar on the grinds dump bin.

14. Holding the portafilter under a group head, depress one of the pour buttons and rinse off any coffee residue.

15. Briefly swivel portafilter in the group head to rinse away any residue. Rinse until clean.

16. Once cleaned, leave the portafilter in the Resting position to keep it warm.

Espresso Base	12 oz. base	16 oz. base
Choco Powder	1 scoop (45 grams)	1 1/3 scoop (60 grams)
Frothed Milk added 1 cm to the rim of the cup	Full Cream Milk around 315 ml	Full Cream milk around 420 ml

Serve Safe Food & Drinks

- ❑ Clean, sanitized hands
- ❑ Use clear gloves (if its needed)
- ❑ Good and clean appearance

Small Equipment's Needed

- Milk jug
- Thermometer
- Macchiato spoon
- Desired Ceramic cup

Step-by-Step Procedures

1

Heat up the ceramic cup with hot water from machine

2

For 12 oz. drink fill the 600 ml jug with full cream milk up to the bottom of the nose of the jug. For 16 oz. drink, fill the 1-liter jug with milk up to 1 cm below the nose of the jug

3

Add chocolate powder. 12oz(45 grams) / 16oz(60grams

4

Froth the milk and chocolate powder together up to **60°C**

5

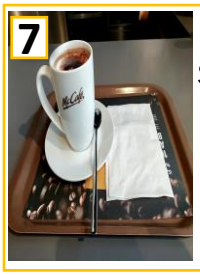

Using the green towel, wipe and purge the steam wand immediately.*(Make sure to have a separate **green towel** for hot chocolate)*

6

Pour the hot chocolate into the cup.

7

Serve with a saucer and Macchiato spoon, then inform the condiments corner to the guests.

Note

- ✓ Maximum 1 drink can be prepared in 1 jug
- ✓ Melitta machine should have 2 green towels (1 for hot chocolate)
- ✓ Group handle machine should have 1 steam wand (choose the steam wand which they use less often) and green towel dedicated for hot chocolate.
- ✓ Don't forget to purge the steam wand before and after use to avoid machine inefficiency.

Note: We will use paper cups for Model 2,3, & Take-out orders.

Operational Hot Spots (Frappe)

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information .

Inadequate blending of ice cubes	- Ensure that correct amount of ice is being used. - Ensure ice is individually separated before putting into the blender (no clumps on ice) - Before each product is served, stir mix to check for a thorough and consistent blend. If ice cubes or “chunks” are still present, place jug back and blend for longer. (Use blender pulse button.)
Watery blended products	- Check quality before blending; ice that has been sitting for hours in thermal ice storage container/bin may have melted into small cubes and may cause ‘over’ blending to occur.
Products lacks flavour	- Ensure correct size of frappe powder scoop is being used. - Ensure correct amount of ice &/or milk being used. Too much will dilute the flavor of finished product - Ensure ice is blended correctly. An icy product will weaken the flavor.

CROISSANT

OPS Operational Procedures Sheet

Responsibility: Shift Manager must ensure procedures followed

Potential Hazards *Follow the OPS Procedures. Keep your eyes on the task at all times to avoid cuts from sharp knives and burns from hot surfaces while preparing, merchandising, heating and serving all sweet products.*

Thaw time	20 mins.
Pre-heat Temp	180° C
Bake temp & time	180° C / 15 minutes
Cool-down time	30 minutes
Secondary shelf life after baking	8 hours

1. Ensure you have enough products available (including thawing of products for next use.

2. Check the quantity of the products to thaw. Check also the expiration of the product (FIFO/FEFO).

3. Wash hands first before wearing clean clear gloves to transfer the frozen product to a clean sanitized tray with silicon.

Process of transferring should be done inside the freezer to avoid thawing of product and close the product immediately.

4. Select the program to use for baking. Oven temperature setting at 180°C, 15 minutes

5. When timer sounds, open the door and remove the baking tray using a heat resistant glove.

Caution! Hot Steam comes out from oven. Do not stand in front of the oven while removing the tray to avoid burns. Be careful.

6. Turn the narrow side of cabinet towards you, put the tray inside. Let the product cool-down for 30 minutes at room temperature.

Check the products' visual characteristics and compare to the Be Well Served Guide.

7. After cooling time, transfer the croissants in a clean display tray and display on the ambient air side of the cabinet.

8. Arrange the product to create a visually appealing effect. Check the display guide.

9. Update the cake timing sheet. Secondary shelf life after baking is 8 hours.

10. Serve to guest. Determine the quantity ordered.

(Heat the croissant only upon customer request)

11. Use tongs to remove croissant.
For take-away: All croissants to be served on 'A' bag.

For dine-in orders, needs to be placed on a clean sanitized ceramic plate add decorative finishes (if applicable) or if requested by the guests.

Open/Close Procedures

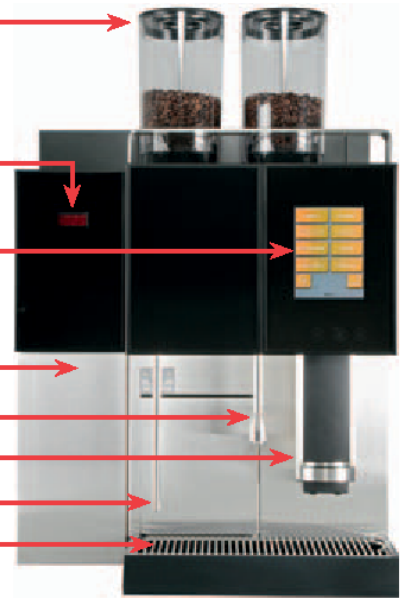

Espresso Machine - Melitta

Responsibility Shift Manager must ensure procedures followed. Refer to equipment manual for further information

OPS Operational Procedures Sheet

Overview

c35 and milk part

Turning on

1| Insert mains plug of the c35.
2| Open front door.
3| Insert "USER" chip card.
4| Remove chip card when prompted by the display.

* Display indicates heating-up phase status.

5| After a brief delay the display indicates instructions for filling with milk. Press **"No"** to use the c35 without milk dispenser or to activate the milk part later. OR fill with milk and press **"Yes"** to turn on the milk dispenser.

Turning off

1| Open front door.
2| Insert "USER" chip card.
3| Remove chip card when prompted by the display.
4| Select "Turn off".

* Cleaning process starts.
* When the cleaning process ends, the machine turns off automatically.

Milk cooler

Turning on

1| If the milk cooler is free-standing, insert plug into a normal domestic socket.
☒ Temperature lights up on the display.
2| Wait until 2–5 °C are reached.

Turning off

1| Perform cleaning.
2| Disconnect milk cooler from the power supply.

Cup warmer

Turning on

1| Press rocker switch to the right.
2| Fill up with cups.

Turning off

1| Press rocker switch to the left.

Coffee grounds

If the grounds drawer is full, the "Drawer" message is indicated on the display of the c35.

Operation:

* "Drawer" message is indicated on the display.
1| Take out and empty grounds drawer.
2| Re-insert grounds drawer.
* "Drawer emptied?" message is indicated on the display.
3| Acknowledge with "Yes".

Filling

Coffee beans and coffee powder

If one of the coffee bean hoppers is empty, the "Bean hopper 1 empty" or "Bean hopper 2 empty" message is indicated on the display of the c35.

Operation:

* Messages "Bean hopper 1 empty" or "Bean hopper 2 empty" and "Fill beans 1" or "Fill beans 2" are indicated alternately on the display.
1| Fill coffee beans.
2| Acknowledge with the Stop key.
3| The message "bean hopper filled?" appears on the display.
4| Acknowledge with "Yes".

Automatically initiated cleaning of the coffee machine

Before the appliance is turned off, the cleaning procedure for coffee and milk part (if used) is always automatically initiated.

How to perform the operation:
Perform the instructions on the display of the c35 as follows.

1| Empty the grounds drawer and acknowledge on the display.
2| Remove milk and acknowledge on the display.
3| Place the empty CAFINA cleaning container in the refrigerator and acknowledge on the display.
Prerinsing of the coffee and milk system begins.

Cleaning the exterior of the coffee machine

WARNING

Electrical short-circuit!
Cloth must not drip water.
Use a damp cloth only.

CAUTION

Do not use any corrosive or abrasive household cleaners. Otherwise, display and housing may be scratched!
Use a damp cloth only. Due to the risk of scald ing do not moisten cloth with hot water from the appliance.

1| Clean the housing and display of the c35 using a damp cloth.

Cleaning the Bean Hopper and the Grounds Drawer

⚠ CAUTION

Remove bean hopper for cleaning.

1| Remove bean hopper and grounds drawer.
2| Clean by hand or in the dishwasher.
3| Re-attach dried parts only.

Cleaning the Milk Cooler and the Cup Warmer

⚠ DANGER

Perform these cleaning measures daily, otherwise hygiene is no longer guaranteed.

⚠ CAUTION

Do not use any detergents. Residue may affect the taste of the coffee.

1| Clean the milk containers of the milk cooler after the automatic cleaning process has run and when the c35 has turned off.
2| Wipe the interior of the milk cooler and the cup warmer with a cloth.
3| Clean the housing of the milk cooler and the cup warmer using a damp clot.

Steam Control Cleaning Plus

To ensure smooth operation of the steam control with as few problems as possible, always follow these instructions (recommendation).

Espresso Machine - Melitta

Responsibility Shift Manager must ensure procedures followed. Refer to equipment manual for further information

OPS Operational Procedures Sheet

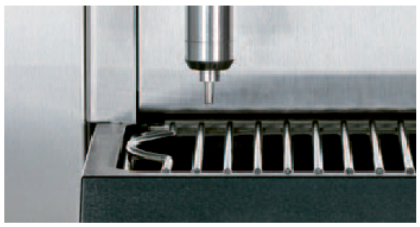

⚠ WARNING

Danger of burns!
The steam discharge tube may be very hot. Therefore you should only hold or move it by the black rubber handle.
The steam is very hot and can result in severe burns and scalding (never hold body parts under the steam discharge).

Every time after use
Clean the steam discharge every time after using.

How to perform the operation:
Follow the instructions below.

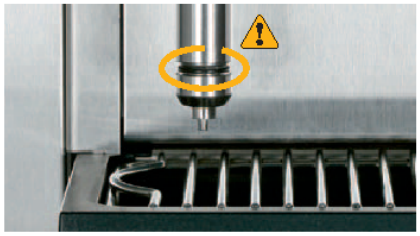

1| After heating or frothing a milk product, remove the glass/pot immediately and press the Steam Control Plus button again. After a short time (about 5 seconds), press the same button you previously selected to stop steam discharge.

2| Clean the steam discharge tube thoroughly with a clean moist cloth until all milk residues is removed.

Cleaning (as needed or at least every time the machine is cleaned).

Remove the discharge nozzle (turn clockwise).

If the nozzle (holes) is extremely dirty, clean with the instruments illustrated below.

Use the drill to open the blocked nozzle holes.

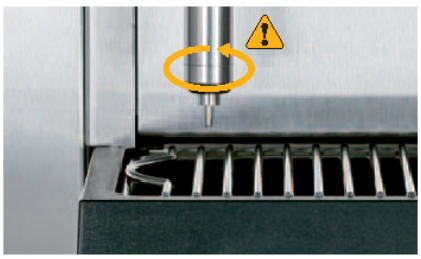

Use the brush to clean the nozzle and the nozzle holes.

4| Fill the cleaning container with hot water. Add a cleaning tablet (Combi Tabs) and stir. After the discharge nozzle is removed, place it in the cleaning container and allow the solution to work.

5| Take the discharge nozzle out of the cleaning container, rinse it with a generous amount of clean water, and then carefully screw it back together again (using only your hands).

Grinder – Cleaning Procedure

Responsibility: Shift Manager must ensure procedures are followed. Refer to equipment manual for further information

GRINDER CLEANING PROCEDURE

1. Switch off the machine. Remove the bean hopper and keep the remaining coffee beans in a dark airtight container

2. Put back the empty grinder hopper, and then switch on the machine. Remove the remaining coffee beans by pressing with the standard base portafilter until machine stops dispensing the coffee grounds.

3. Transfer grinder cleaner tablets into the cap of container (approximately 30 grams) and put it in the bean hopper.

4. Draw the grinder cleaner by pressing standard base mode until it's completely dispensed.

5. Transfer back the coffee beans you removed earlier and dispense two standard bases. Make sure that there is no remaining residue of cleaning powder before serving an order.

*** Grinder cleaning should be done every 1st of the month before opening shift starts.**

Espresso Machine – Cleaning Procedure

Responsibility: Shift Manager must ensure procedures followed. Refer to equipment manual for further information

STEAM WAND CLEANING PROCEDURE

1. Remove the cap and press the bottle until you fill up the detergent up to 20 ml.

2. Prepare the Milk Cleaner Solution (20 ml of Milk cleaner into 500 ml of warm water).

3. Soak the steam wand for 5 minutes into the solution then rinse with clean warm water. (Use the jug that has milk stone build up, milk cleaner also removes the stain in the jug.).
4. Wipe the steam wand with sanitized towel. Activate the wand 3 to 5 seconds.

***Steam wand cleaning should be done on daily basis.**

SOC Station Observation Checklist

Trainee's Name: _____ Trainer's Name: _____ Date: _____

ARE YOU READY FOR WORK?

Appearance
Uniform (including name badge) is neat, clean and worn correctly.

Float checked
Float counted out of sight of customers and signed for before serving customers.

Clean hands
Hands are washed using correct procedures before starting, at least hourly during the shift and at other times when required. Any open cuts, wounds or sores on hands and fingers are covered with a Blue Adhesive Strip and a glove.

Check stock and equipment
Check that there is adequate stock available (24 hours paper/2 hours refrigerated). Check that equipment is clean, safe and in good working condition. Do not use equipment that has any visible damage to electrical fittings.

OBSERVATIONS:

SET UP McCAFE AREA

Cleaning and waste materials
Position all bins (including waste bin and rubbish bins). Prepare cloth buckets and position cloths (yellow striped cloth near coffee machine, green striped cloth near coffee machine and pink striped cloth near sink area). Prepare cleaning chemicals and tools and position in appropriate places.

Small equipment
Ensure all small equipment items are available and positioned correctly.

Calibrate milk thermometer
Fill a coffee cup with ice and add cold water (or soda water) from a beverage tower (should be 60% ice and 40% cold water). Stir the water and ice mixture with the milk thermometer until the temperature stabilises. The temperature should read 0°C ± 1°C. If temperature reading is not within range inform a manager and/or adjust thermometer.

Fill ice bin

OBSERVATIONS:

SET UP EQUIPMENT

Turn on oven, microwave and blenders
Plug equipment into power outlet and turn on at power point as per Equipment Fire Up schedule.

Turn on press toaster
Ensure that top platen of toaster is down and turn switch to "ON" position as per Equipment Fire Up schedule. The toaster will take around 30mins to reach required temperature.

Assemble dishwasher
Check dishwasher is correctly assembled. Check McD Dishwasher Detergent and Kay Rinse Aid are both full and that the feed tubes are submerged fully into correct chemical bottles and chemicals are being drawn up into the machine. Turn machine on and select wash cycle (if applicable).

Prepare coffee machine
Fill bean hoppers: Fill bean hoppers using beans in airtight containers first

Turn machine on: Turn machine and cup warmer on and leave until they have warmed up.

Flush machine: Once warmed up, flush machine by placing a coffee cup under coffee outlet and press 'Coffee' button twice. Flush hot water outlet for 3 seconds into empty cup.

Drain steam wand: Drain steam wand by releasing steam for 3 seconds (as per your equipment). Ensure that the steam wand is directed away from you and other crew and customers.

Perform crema test: Position demitasse cup under coffee outlet, prepare base (as per your equipment). The prepared base should have a thick, golden crema visible on top of coffee. Sprinkle ½ a packet of sugar over crema, sugar crystals should hold briefly on crema before gradually sinking through base. With a teaspoon, stir prepared base 2 or 3 times, the crema should reform.

OBSERVATIONS:

SET UP DISPLAY CABINET

Sanitise display cabinet
Spray a clean, sanitised cloth with McD Sanitizer solution and wipe out inside surfaces of the display cabinet.

Display products
Wearing clear gloves, carefully remove product from decor containers. Place product on clean, sanitised display plates. Do not stack small cakes, tarts or chocolate slices. Always display products with correct item tag. Store and display gluten free products separately from non-gluten free products and ensure separate utensils and gloves are available to handle gluten free products. See the McCafé Merchandising Guide for cabinet layouts.

OBSERVATIONS:

McCafé Open

SOC Station Observation Checklist

QUALITY & FOOD SAFETY

If it is not right, don't serve it

Only serve products which have been prepared following correct procedures. If a product is not prepared using correct procedures waste the product according to your restaurant's waste policy.

Follow storage requirements

Ensure that all products and prepared products are stored correctly in refrigerated units (1–4°C). Do not use or serve products which have not been stored at correct temperatures.

Monitor holding times

Do not serve product past its holding time. Waste product according to your restaurant's waste policy.

SANITATION & CLEANING

Clean As You Go

Clean as you go to keep area safe, tidy, clean and sanitary. Use paper towel and a mop to clean up oil or dairy product spills (Dry Wipe procedure). Use a wet floor sign to warn customers and employees of wet or slippery floors. Ensure that correct cloth sanitation procedures are followed at all times.

Sanitise trays and utensils

Wash, rinse and sanitise cambro containers, storage containers, tongs between each use.

NEED TO KNOW (Tell and Show)

Workplace Safety Hazards

Give an example of each of the hazard icons identified for McCafe Open and describe how you would initially control and report these hazards in the Hazard Log.

OBSERVATIONS:

CLOSE PREPARATION

Count waste

Collect all required cleaning supplies
Collect all required cleaning supplies. These include:

McD Sanitizer	Paper Towel	Coffee Machine cleaning detergent/tablet
Non scratch pad	Small brush	Cloth Bucket and Clean Cloths
Small coffee brush	Broom/mop	Spray bottle of McD APC

HOT TIPS
Ensure sufficient food remains in display cabinet up to close so that it appears full and appealing to customers.

Clean McCafé area
Detail clean display items such as cookie jars, syrup bottles, canisters, inside cupboards/shelves. Wipe clean and polish register. Wash, rinse, sanitise and air dry prep board.

HOT TIPS
Whilst completing any activities prior to the restaurant closing ensure that customers remain your number one priority.

CLEAN EQUIPMENT

Clean Press Toaster
Isolate: Isolate toaster as per McDonald's Electrical Isolation procedures. Allow to cool down for 45 to 60 mins.
Clean cooking surface: Spray McD APC on clean, sanitised cloth, wipe cooking surface and allow to sit for approximately 30secs. Scrub surface with a non scratch pad and wipe with a clean, sanitised cloth.
Clean outside: Spray McD APC onto a clean, sanitised cloth and wipe outside of toaster clean. If heavily soiled, use a non-scratch pad and holder to scrub heavily soiled areas on outside of toaster. Spray a small amount of McD Stainless Cleaner-Dressing onto paper towel (do not spray directly onto toaster) and polish exterior stainless steel sections of toaster.
Clean drip tray: Remove and dry wipe drip tray. Wash, rinse, sanitise and air dry before replacing.

Clean Microwave
Clean inside: Spray McD APC on a clean sanitised cloth and wipe inside of microwave. Sanitise inside with McD Sanitiser.
Clean outside: Spray a small amount of McD Stainless Cleaner-Dressing onto paper towel (do not spray directly onto microwave) and polish exterior stainless steel sections of microwave.
Clean Spatter Shield (as required): Isolate microwave and carefully remove splatter shield by placing fingers behind shield and pulling forward and down. Wash, rinse, sanitise and air dry the splatter shield. Re-install splatter shield by fitting tabs into slots at the top of the oven cavity back. Lift and press front of shield until so shield snaps into place.

Clean Frappe Blender/s
Do not place any part of the jug or blended in the dishwasher.
Clean cover: Remove sound reducing cover and wash, rinse, sanitise and air dry.
Clean jug: Fill jug ¼ full of luke warm water, add one pump of McD APC from the plunger bottle. Return jug to motor base, secure lid and run blender for 30 seconds. Empty jug and repeat if required until all solid residue is removed.
Rinse jug: Rinse jug by filling jug ¾ full with warm water. Return jug to motor base, secure lid and run blender for 30 seconds. Empty jug.
Sanitise jug: Fill jug with McD Sanitizer solution from Waste-Not container in wash room. Return jug to motor base, secure lid and run blender for 30 seconds. Empty jug and rinse with clean water.
Assemble blender: Return empty jug to motor base and run blender for 5 seconds. Assemble blender leaving lid unsealed and allow to air dry.
Clean base: Unplug base from power outlet. Wipe motor base with a clean cloth rinsed in McD APC. Never immerse motor base in water.

Cup Warmer
Remove all crockery. Spray a clean, sanitised cloth with McD APC and wipe shelves and exterior. Spray a second cloth with McD Sanitizer solution and wipe inside shelves.

Dishwasher
Prepare dishwasher: Empty all cutlery and crockery from dishwasher.
Clean dishwasher: Clean dishwasher and inspect equipment parts as per your dishwasher model. Follow dishwasher cleaning procedures on the McCafé Equipment OPS for your dishwasher model.

Clean Oven (Ensure oven cool prior to cleaning)
Clean inside: Open door slightly (approx 20cms) and activate cool down function. Isolate equipment. Remove racks. Spray McD APC directly onto a No-Scratch pad and oven walls. Use No-Scratch pad to remove stains. Spray McD APC onto a sanitised cloth then wipe over all sides and back of oven.

OBSERVATIONS:
